MEET INTERFILTER GROUP

Mission

The mission of the Interfilter Group is to create purity. For now and for the future. Interfilter Group offers the solution for every situation where filtration, compressed air or nitrogen is required.

Vision

Interfilter Group was founded in 1976 and has since developed increasingly as a manufacturer and total supplier in the field of filtration, compressed air and nitrogen. With more than 45 years of experience, the divisions within Interfilter Group supply more than just elements, installations and accessories. Every employee strives for perfect performance and together the team does everything possible for the ultimate customer experience and sustainability when it comes to the products and services it delivers. With this vision we have now grown into a leading manufacturer and supplier on the market.

Strategy

In addition to offering extremely high service and quality, we strive to completely unburden the customer and create a full-fledged partnership. Interfilter Group is appreciated by its customers for its customer focus and personal approach, its innovation, flexibility, reliability and transparent way of communicating.

Filtration Divisions

Interfilter Industries is an expert in the field of process filtration. We immerse ourselves in your industrial process, so that we can select the best filters for your specific situation.

Interfilter HVAC specializes in providing clean air. We have everything you need to provide your ventilation system with the best possible air filters.

Interfilter Automotive specializes in supplying filters within the automotive industry, such as shipping, offshore and paint shops.

Compressed Air and Gas Division

Avilo Stikstof & Persluchtsystemen is a nitrogen, hydrogen and compressed air expert. We design, produce, install and maintain these systems.

PARTNERSHIP

What can you expect from us?

Intensive partnership

There is always a permanent and trusted team available for you with a strong focus on your needs.

Superior logistics

You will receive your orders packaged per destination and delivered just-in-time thanks to our own production and large stock in the Netherlands.

Optimization, cost reduction & engineering

Together we strive for optimization and the most sustainable solution for your specific situation.

Sustainable products, services & innovations

Thanks to our innovative character, we supply the most sustainable products and services.

SUSTAINABILITY & INNOVATION

Corporate Social Responsibility (CSR), our sustainability policy and innovative character are in the Interfilter DNA. A Dedicated Team works every day on innovations and contributions to an environmentally friendly future. As an example, our business premises with energy label A+++++ are 'all-electric' and with 450 solar panels, the building meets 80% of our energy needs.

Product development

Responding to developments in a constantly changing market, but also innovations with a completely new view in the field of filtration and its application. Our energy-efficient filters, ProScreen, the Lean Filter with Circular frame (LFC), EPD certified air filters and our own gas generators are examples of this.

Digitization

In our rapidly changing world, digitalization plays a major role. This is also the case with Interfilter. Efficient (online) purchasing of your products, our order processing and sharing our knowledge with you are a number of key points that we work on every day.

Sustainability & circularity

Over the years we have been progressive in the market when it comes to supplying and developing sustainable products. Reducing the waste mountain, reducing energy costs and reusing materials fits within our vision. We prove the savings. Examples of this are cleaning filters and our participation in EcoVadis.

Would you like to always stay informed about our innovations and developments? View our sustainability page.

FILTRATION DIVISIONS

The filtration branch of Interfilter Group consists of three different companies, each with its own specialization in filtration. Within these divisions we use this specialized knowledge to always provide you with the right product or service.

METHOD

Research

To start, we map out your entire filtration process at your location and look at your needs to achieve the maximum result.

Advice

Thanks to development and engineering, we can give you appropriate advice where we zoom in on the optimization of, among other things: lifespan, performance, efficiency, waste and costs.

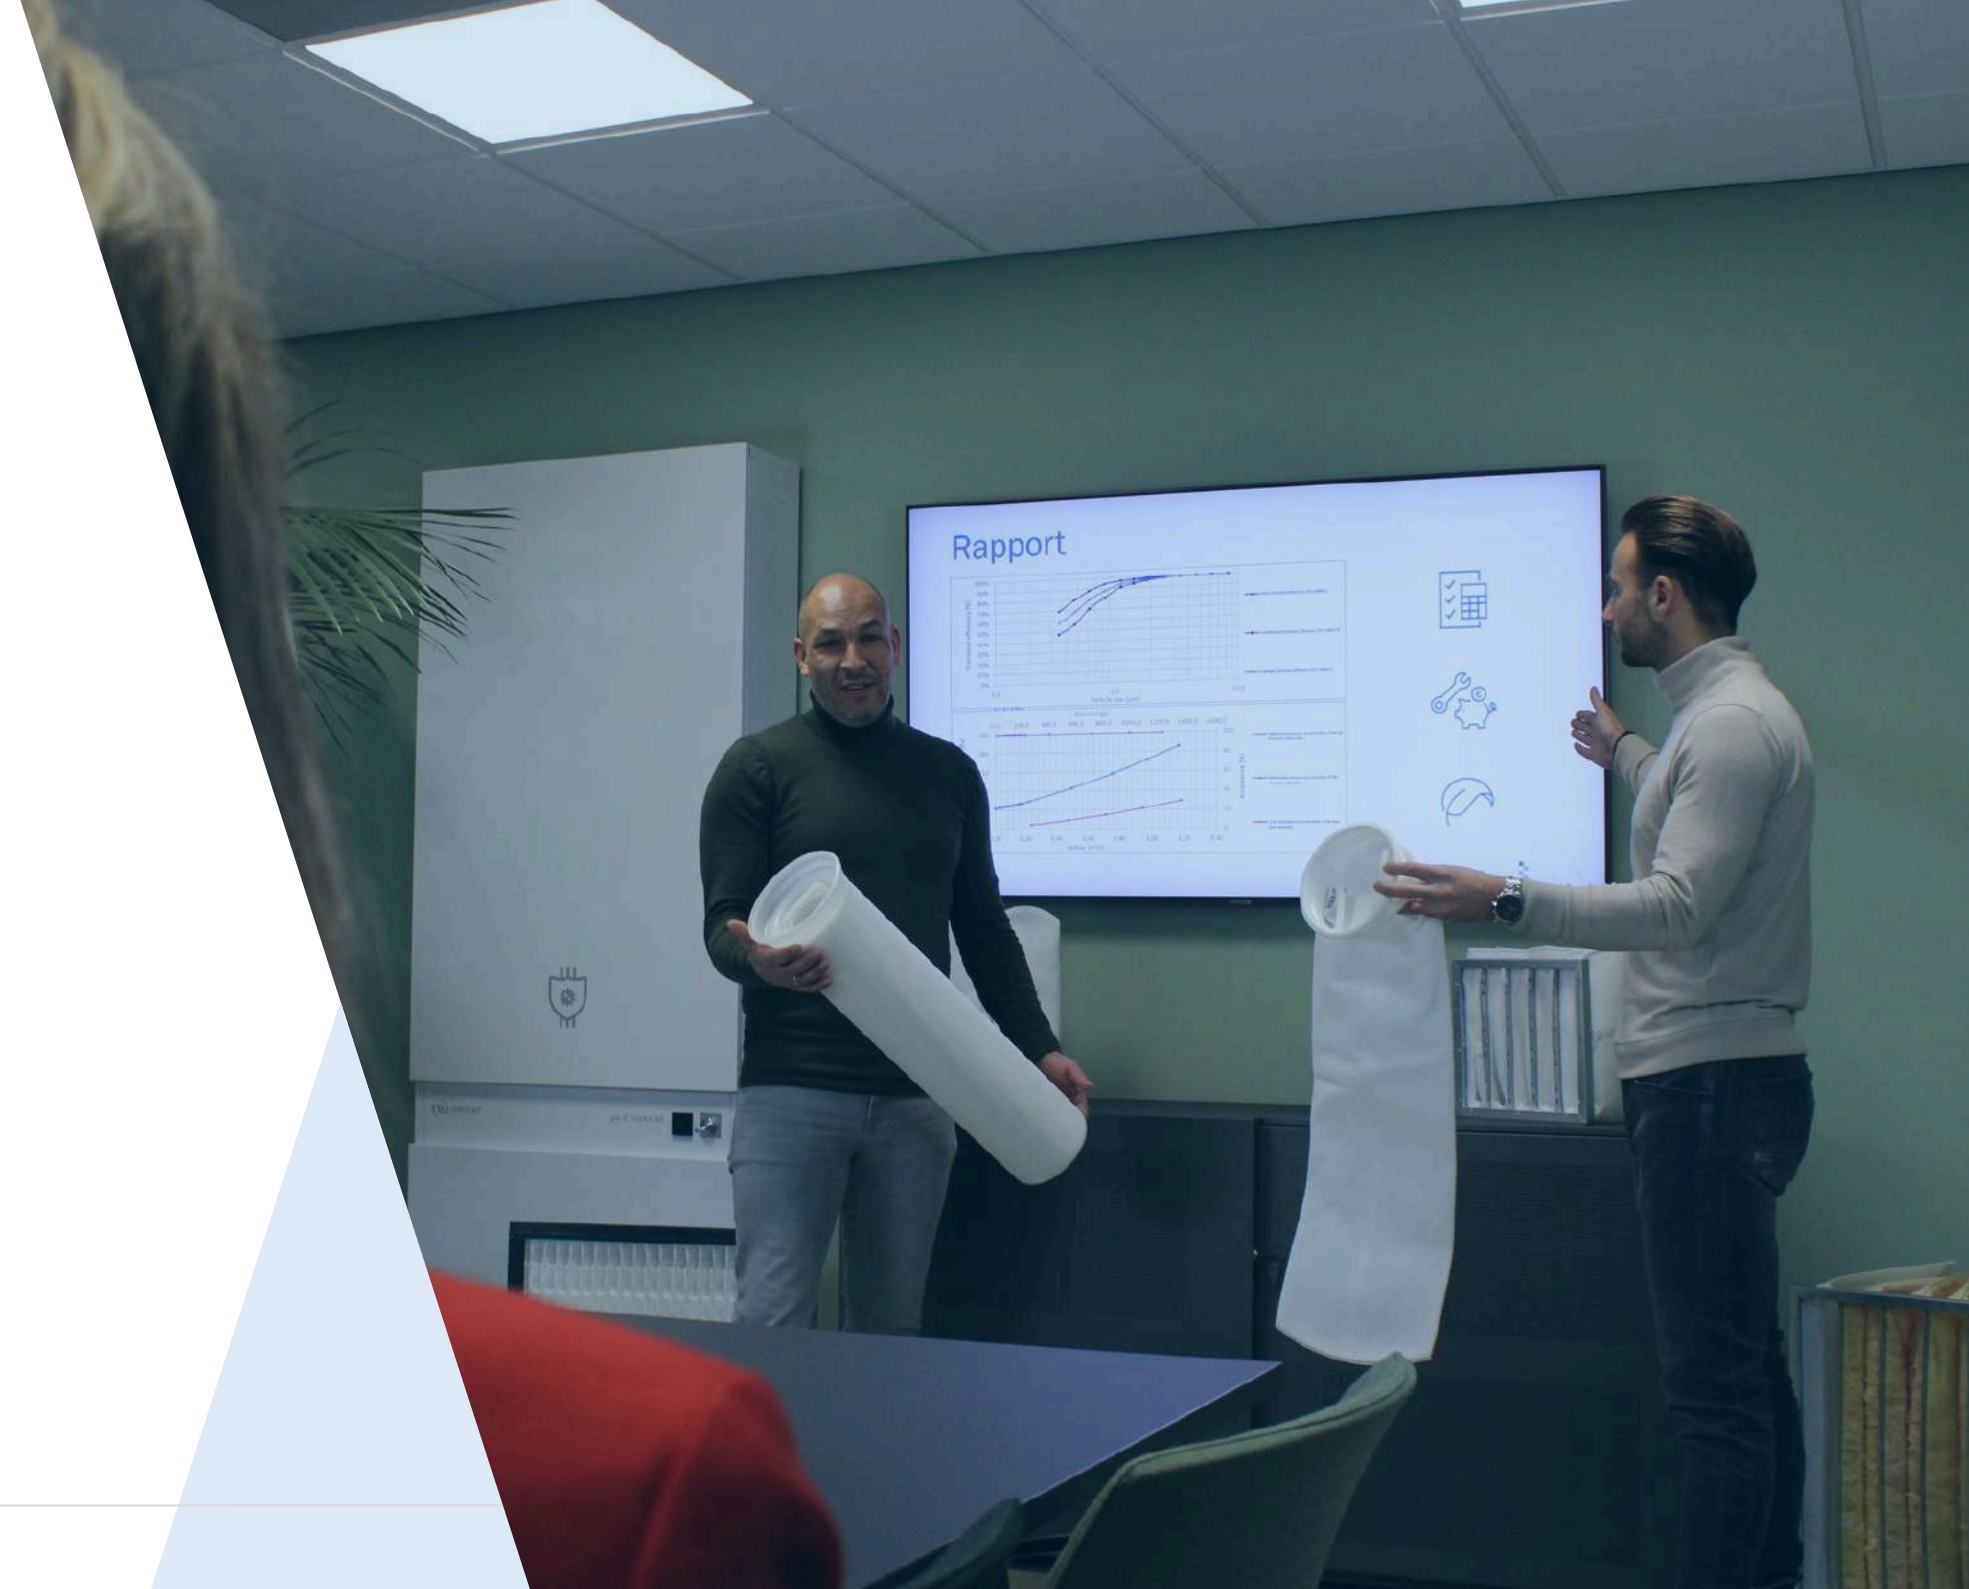

Implementation

Implementing and monitoring the solution provided.

Evaluate & optimize

After implementation, we analyze and evaluate the results at various times, always looking for further optimizations.

INTERFILTER INDUSTRIES

Expert in the field of process filtration

Interfilter Industries is an expert in the field of liquid, dedusting and gas filtration. We delve into your industrial process with the aim of selecting the right filters and systems for your situation, taking into account the quality of the end product.

Together we provide a healthy, safe work environment where we try to reduce the burden on the

environment and take into account specific requirements in your process. We map out your entire process on location, in which filtration is applicable, and look at your needs. Thanks to knowledge and engineering, we can provide you with appropriate advice, focusing on, among other things: product lifespan, optimal performance, less downtime, cost optimization and circularity.

We deliver for:

- (Petro)chemicals**
- Foods**
- Pharmaceutical**
- Packaging**
- Geothermal**
- Water purification**
- Storage and transshipment**

AND MORE SEGMENTS

We are of course active in many more segments.

Reusable filters in the plastics industry

Challenge

Our customer in the plastics industry used hot gas filters in part of the process that had a lifespan of four weeks and were disposed of as waste after saturation. Changing the filters was an intensive job because of the weight of the filters and because it is usually very warm around the filter housing in the factory.

Advice

Interfilter Industries developed a multi-layer filter with a larger filter surface, which is cleanable and therefore a reusable filtermedium. The filter is also lighter in weight.

Result

Thanks to the filters with a lifespan of no less than eight weeks and the cleanable medium, the annual filter costs have decreased by more than 75% and the customer now also has a huge reduction in waste (costs). In addition, employees in the factory have to change filters less often and the filters are much lighter, which significantly improves working conditions.

75% less costs

Reusable filters

“We earned back our investment within 6 months”

Liquid Filters

Dedusting

Gas Filters

Hardware

Of course we have much more in our range.

Curious about all our products? Ask for the possibilities.

INTERFILTER HVAC

Specialist in the field of air filtration

Interfilter HVAC specializes in providing clean air. We have everything you need to provide your ventilation system with the right air filters and accessories. We do this by selecting the correct ISO16890 filter class for your installation based on air quality measurements

and Eurovent 4/23. We are also happy to look together with your customer at possible savings on CO2 emissions, energy, waste and purchase costs. Our focus is on running the installations as efficiently and sustainably as possible.

We deliver for:

- Utility buildings**
- Data centers**
- Hospitals**
- Schools & universities**
- Hospitality**
- Museums and archives**
- Food products**

AND MORE SEGMENTS

We are of course active in many more segments.

Optimization of air management Sheraton Amsterdam Airport Hotel

Challenge

A healthy indoor climate is high on the agenda at the Sheraton Amsterdam Airport Hotel. The hotel uses mechanical supply and recirculation air. How can this best be arranged to create a healthy environment for all guests and employees?

Advice

The NWES98 PLUS bag filters were recommended and installed together with Dophou.

These comply with the advice of Eurovent 4/23 and REHVA in case of recirculation. The filter is classified as ePM1-90% (A+) and has a virucidal coating for capturing virus particles. PM1 filters have also been installed in the supply section of the AHUs.

Result

A safe and clean environment for guests and staff. In addition, the 20% more expensive filters pay for themselves within 4 months thanks to the low energy consumption and activated recirculation.

Select from our product range

Bag Filters

Panel Filters

Compact Filters

Absolute Filters

Of course we have much more in our range.

ROI in 4 months

Clean indoor climate

“In addition to hospitality, we now also offer our guests optimal protection against particulate matter and viruses during their stay”

INTERFILTER AUTOMOTIVE

Expert in filtration for the automotive industry

Interfilter Automotive specializes in supplying filters for the automotive industry. This ranges from fuel and lubricating oil filters for shipping to paint collection filters for paint shops.

We are happy to map out the entire filtration process on location with you. After this analysis we give you

appropriate filter advice with improvement proposals that take sustainability and other wishes into account. Within the automotive industry we can supply the entire filtration scope and, if desired, we can keep your filters in stock. This ensures fast delivery times, even in case of urgency.

We deliver for:

- Automotive industry**
- Shipping**
- Offshore**
- Spray shops & paint shops**
- Blasting & construction companies**
- Woodworking & processing**
- Metal smelting & foundry**

AND MORE SEGMENTS

We are of course active in many more segments.

Are you curious whether we can also support you?

Heat recovery installations for paint shops

Challenge

Spray booths consume a lot of gas and energy, which is why Van de Giessen Metaal decided to develop an Ecocab spray booth. The question to Interfilter was: can we reuse the extracted air, which is normally blown outside, through filters and bring it back into the building?

Advice

For every installation that needed to be converted or newly installed, appropriate units

with carbon filters have been installed to keep the heat produced within the building. Different types of carbon are used for different types of paint.

Result

Thanks to the appropriate carbon units, there is now no longer any heat and energy loss in the cabin in the paint shop.

Making installations more sustainable

Reuse heat air

“In collaboration with Interfilter, we have developed a customized solution that has enormously reduced our energy costs”

COMPRESSED AIR & GAS DIVISION

The compressed air and gas division of Interfilter Group consists of Avilo Stikstof en Perlsucht Systemen with its own specialization in compressed air, nitrogen gas and hydrogen gas. Within this division we use this specialist knowledge to always provide you with the right product or service.

Compressed Air & Gas Treatment

Authorised Parker Distributor & Repair Center

As a Compressed Air & Gas Treatment Distributor, we supply an extensive range of compressed air & gas treatment. These include filters, dryers, coolers and (lab) gas generators. We supply these products from the brands Parker Domnick Hunter, Parker Hiross and Parker Zander, among others.

As a partner of Alup, among others, we supply the compressors for your installation, which we complete with TransAir piping.

Own brand: Avilo gas generators

We also manufacture our own nitrogen generators, built from Parker components. With our own generators for nitrogen, hydrogen or Zero Air, we offer a safe and cost-efficient alternative to the expensive supply of gas bottles.

Because we are a stock-keeping supplier with our own production department, we assure you of very short delivery times and rapid response in case of emergencies.

Membrane Gas Generators

Lab Gas Generators

Tire Inflation Systems

Pressure Vessels

Piping

METHOD

Analyze

To start, we map out everything at your location and look at your needs to achieve the best results.

Configure

Thanks to our own engineering and production, we configure an optimal compressed air and/or gas system for your specific situation.

To install

Once approved, we will deliver your complete installation turn-key to you with short delivery times and we will install it.

To maintain

We also offer the option of maintaining your installation or retrofitting existing installations.

Using nitrogen as an analytical gas

Challenge

Aqualysis is an accredited laboratory (RvA L230) specialized in water research. The lab used liquid nitrogen for high purity applications, but the introduction of new LCMS systems led to a dramatic increase in nitrogen consumption, especially low purity 98% nitrogen.

Advice

Avilo recommended using the Avilo SuperFlux nitrogen generator, in combination with a new compressed air supply. The Avilo SuperFlux produces low-purity nitrogen, which exactly meets the requirements of the LCMS

systems. To ensure continuity and prevent downtime of analysis runs, two compressors were installed to deal with any malfunctions.

Result

This new system provides Aqualysis with great benefits in terms of purchase and usage costs. With 98% purity, 8 pressure bar and 205 L/min flow, Aqualysis can rely on continuous 24/7 analytical nitrogen gas. In addition, the membrane technology is extremely reliable because it contains no moving parts.

98%
